PG Reads

OVERVIEW OF THE WEBSITE :

The main purpose of this website is to find people who share same interests as you. No, It is not a dating website. Sharing Interests as in what you like to read, how much you like to read and how much your friends share their interests with you.

WEBSITE DETAILS :

Name Of The Website : PG Reads

Purpose : To Make Reading Interactive By Making Friends With People Who Read On Similar Like You

WORK AS A TEAM :

As a team, we have tried our best to create a FrontEnd which is simple yet attractive in its own way. We have 3 members in our team :

- Gaurav Shukla (Providing Interface With HTML)
- Yatharth Rawat (Styling With CSS)
- Pradumya Gaurav (Handling JS)

We have divided the work equally.

In the first phase, we created an HTML code to provide a structure for our website and with the help of CSS file we did the styling. The use of JS is yet to be implemented as we were only able to create the homepage of our website.

We will update our website if we get any new ideas and in the next phase we will be using JS to handle the BackEnd of our website.

What We Did Between 1st & 2nd Phase :

We didn't made any massive change in our code as we were busy in attending Indradhanush event, but even so we've made some progress. We can now store the input statements in local memory of the search engine. Also, we've made some modifications in the UI of the website. We will be updating our website as we further move ahead in this competition.

Work Distribution Between Different Phases Of Evaluation:

We have distributed the work load among the 3 of us very effectively so as to reduce pressure being on a single person throughout the competition. We were able to create a HomePage Of Our Project "PG Reads" with the use of HTML and CSS, we were also planning to use JavaScript but as we didn't knew about BackEnd and other stuff, so we didn't include it much. Still, we did our best in creating a user-friendly interface and show our efforts.
